

QEF Neuro Rehabilitation Services

Achieving Excellent Outcomes

A study of younger adults, with severe to very severe traumatic brain injury, who attended QEF NRS over a ten year period, found they can attain a positive vocational outcome following intensive neurorehabilitation consisting of traditional therapies in addition to educational and vocational rehabilitation¹.

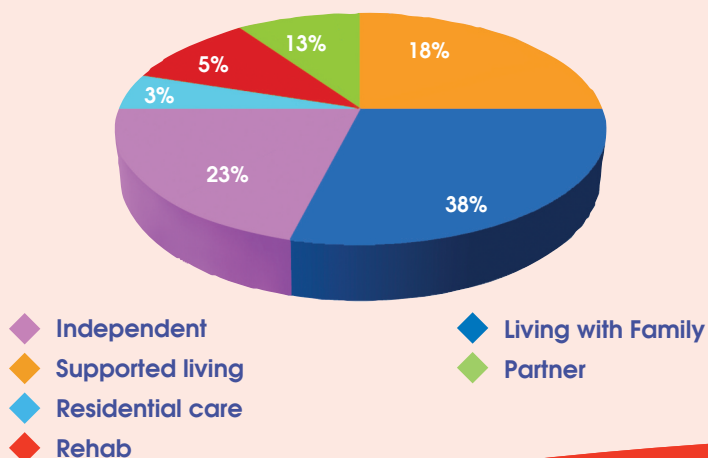

¹FoyCM. (2014) Long term efficacy of an integrated neurological and vocational rehabilitation programme for young adults with acquired brain injury. J Occup Rehabil. 2014 Sep;24(3):533-42.

We have delivered specialist neurorehabilitation to people recovering from acquired brain injury for more than 20 years

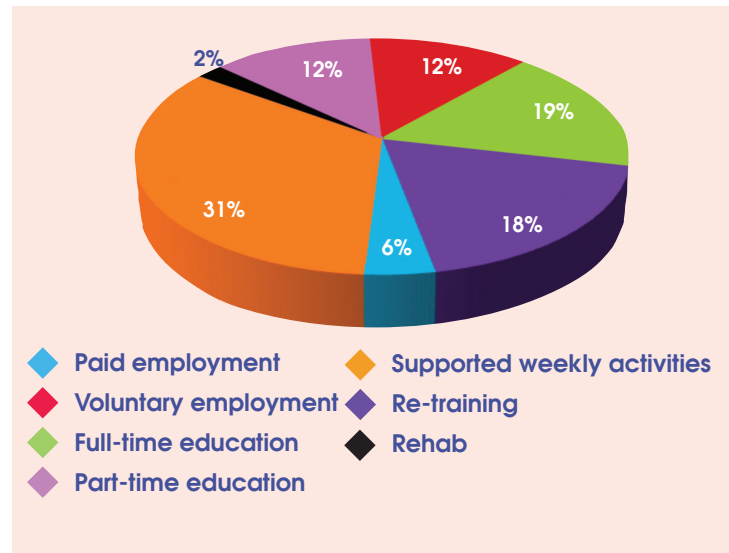

- Unique, Surrey-based service
- Drawing on 80 years of experience
- Male and female clients aged from 16 years
- Residential and non-residential programmes include:

Intensive neurorehabilitation
Vocational rehabilitation
Transition support
Outreach services

Destination of QEF NRS clients (2012-2014)

Educational/vocational progress of clients leaving QEF NRS (2012-2014)
