

# Outcomes: Making a measurable difference

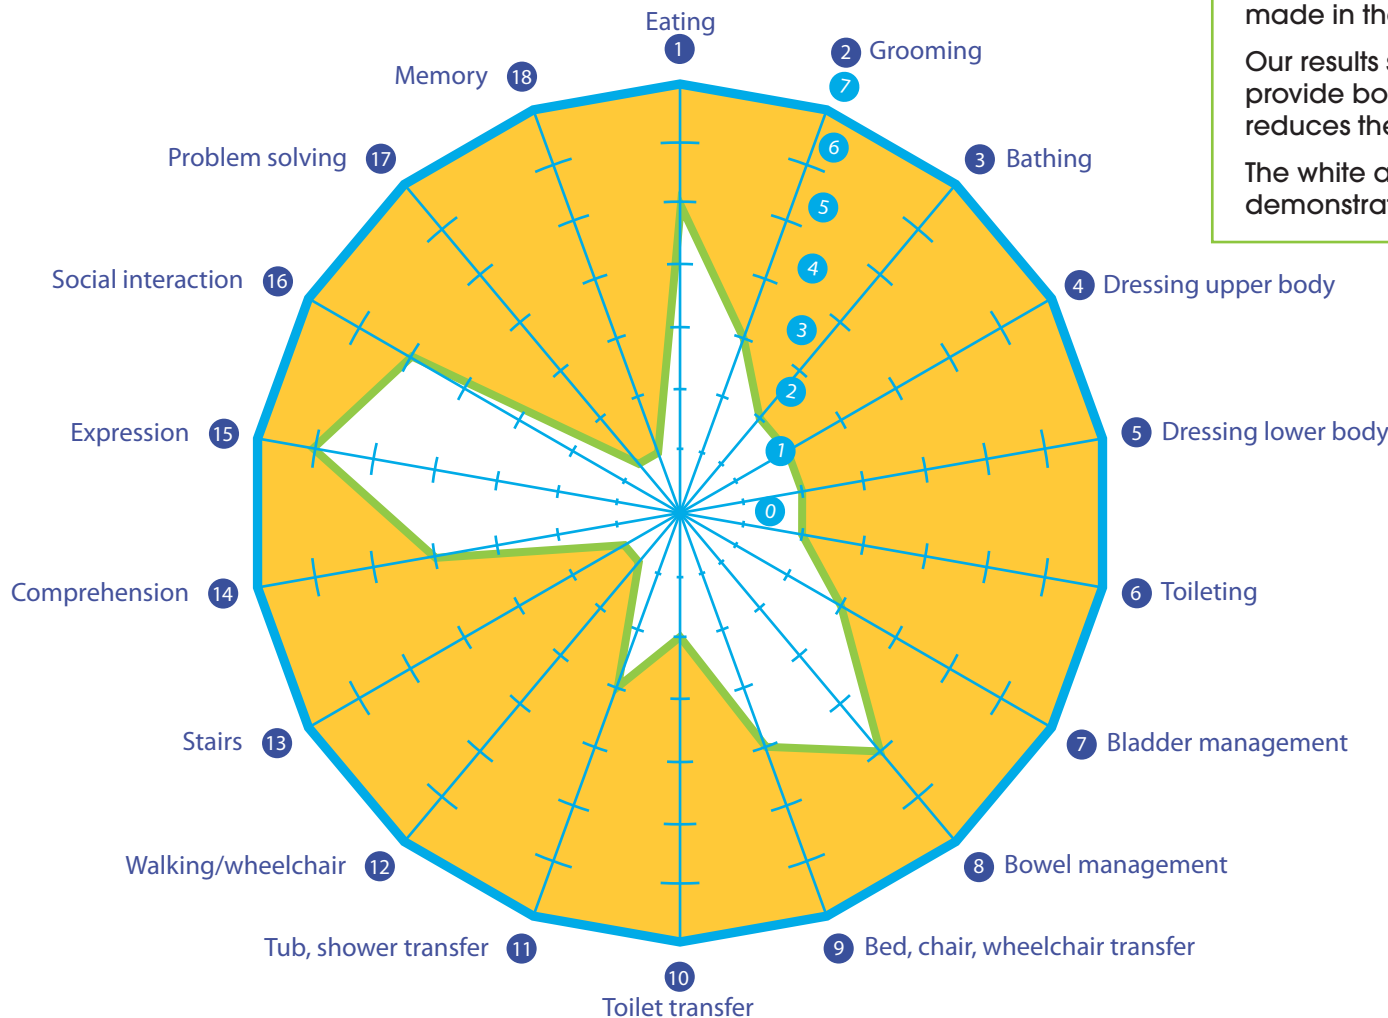

## Alex's journey

To plan support for our clients we observe their levels of mobility, cognition, communication, and ability to perform various daily living and personal care tasks.

This is measured using the FIM + FAM (Functional Independence Measure and Functional Assessment Measure) scales. By comparing clients' FIM + FAM figures on admission with those on discharge, we can see how much progress each person has made in their time with us.

Our results speak for themselves. The neuro rehabilitation we provide both increases the potential for independence, and reduces the levels of support required.

The white area shows Alex's scores on admission. The yellow demonstrates his achievement by the time of discharge.

### FIM GRAPH

Admission - 15 Nov 15

Discharge - 14 Jul 16

#### FIM DOMAINS

1-13 Motor

14-18 Cognitive

#### FIM SCORES

7 Complete Independence

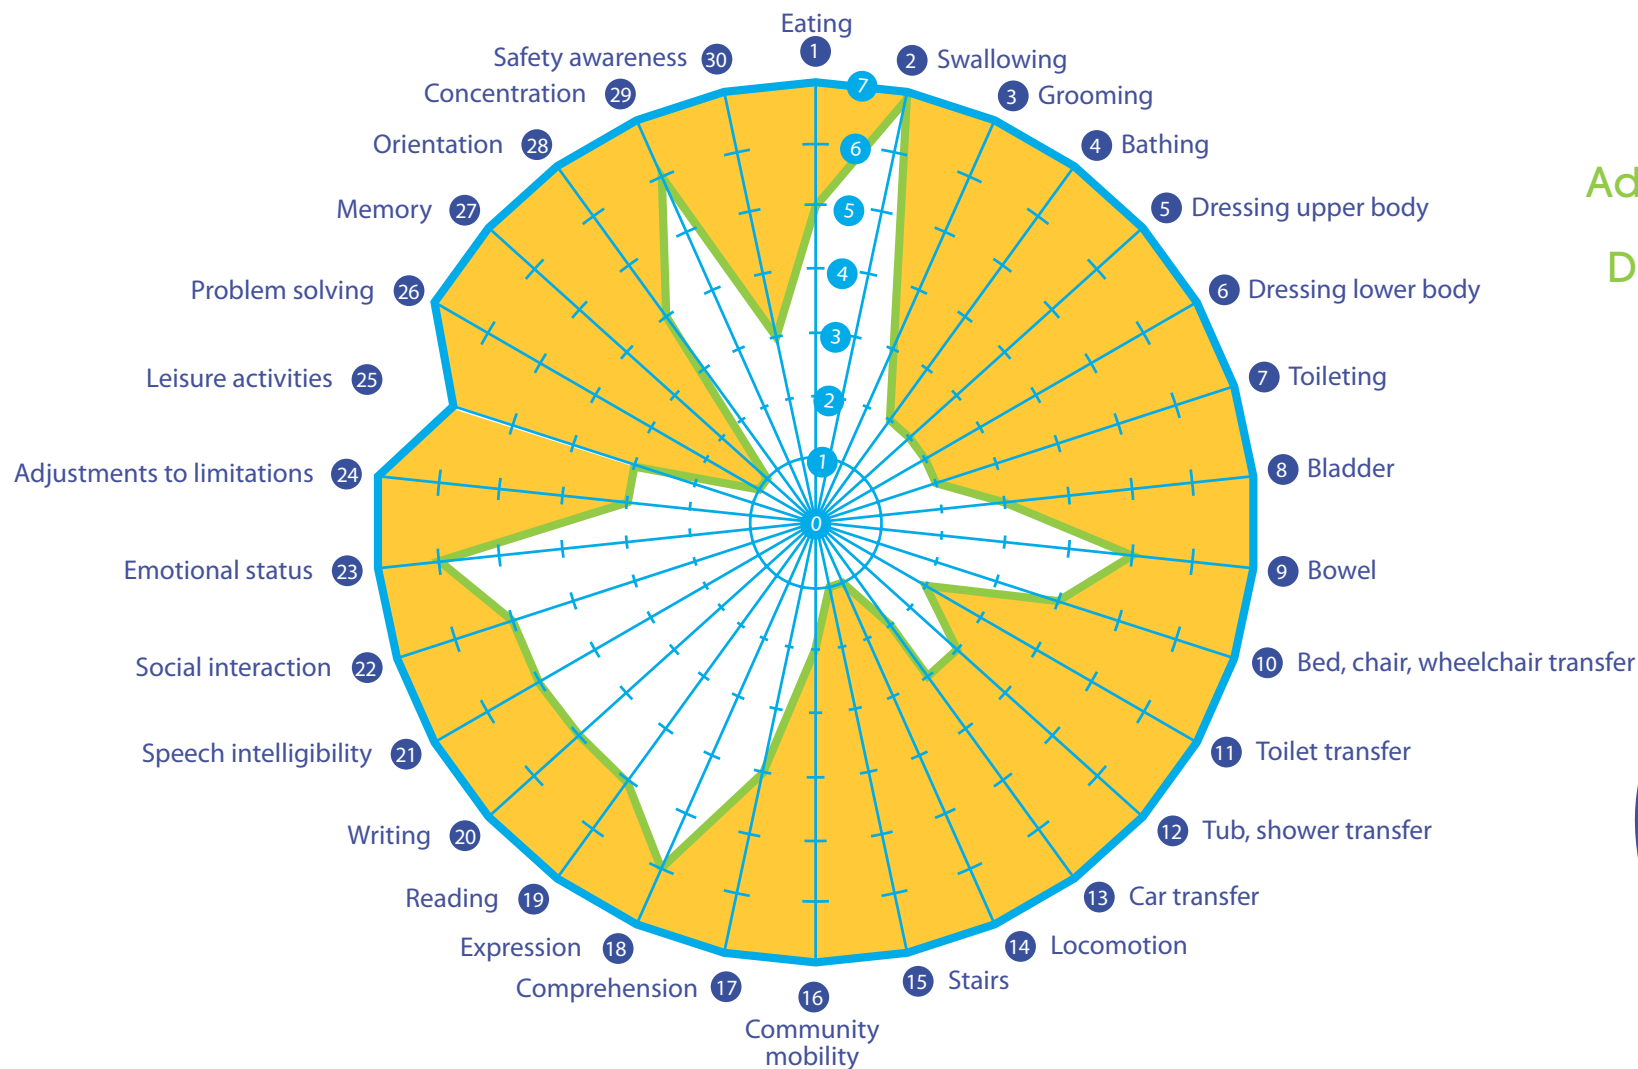

6 Modified Independence

3-5 Modified Dependence

1-2 Complete Dependence

# Outcomes: Making a measurable difference

### FIM/FAM GRAPH

Admission - 15 Nov 15

Discharge - 14 Jul 16

#### FIM + FAM DOMAINS

##### MOTOR SUB-SCALES

- 1-9 Motor
- 10-13 Mobility/Transfer
- 14-16 Locomotion

##### COGNITIVE SUB-SCALES

- 17-21 Communication
- 22-25 Psychosocial Adjustment
- 26-30 Thinking Function

##### FIM + FAM SCORES

- 7 Complete Independence
- 6 Modified Independence
- 3-5 Modified Dependence
- 1-2 Complete Dependence
